The screenshot shows the 'Upload' page in the AWS IAM console. At the top, there's a navigation bar with 'IAM', 'Users', and 'Groups' tabs. The 'Groups' tab is selected, and the 'Users' group is chosen. The 'Upload' page has a heading 'Upload' and a sub-heading 'Add the files and folders you want to upload to S3'. Below this, there's a text box for 'Drop and drag files and folders you want to upload here, or choose Add file or Add folder'. There are three buttons: 'Remove', 'Add file', and 'Add folder'. Below these, there's a section 'Files and folders (2 total, 8.0 MB)' with a table of files to upload. The table has columns for Name, Folder, Type, and Size. The files are 'upload-group-requests-34647105-203444', 'upload-group-requests-34647105-203444', and 'upload-group-requests-34647105-203444'. Below the table, there's a 'Destination' section with a dropdown menu for 'Destination' and a 'Destination' label.

The screenshot shows the Amazon S3 console interface for a bucket named 'samplebucket007'. The breadcrumb navigation at the top indicates the path: 'Amazon S3' > 'Buckets' > 'samplebucket007'. The bucket's full name and ARN are displayed at the top right. The left-hand navigation pane lists various S3 features, with 'Buckets' selected. The main content area is divided into several sections: 'Object overview' (showing details for 'image.jpg'), 'S3 logs' (with a link to the bucket's logs), 'Amazon Resource Name (ARN)' (providing the bucket's ARN), 'Entity tag (ETag)' (showing the ETag for the selected object), 'Object URLs' (providing a link to the object), 'Object management overview' (explaining the impact of bucket properties and object management configurations), 'Bucket properties' (showing details like creation date, region, and versioning), and 'Management configurations' (showing settings like public access, logging, and encryption). The 'Object overview' section is currently expanded, showing details for the object 'image.jpg', including its key, last modified date, size, type, and storage class.
